Advanced Multivariate Statistics with Matrices (Mathematics and Its Applications) Tõnu Kollo, D. von Rosen

The book presents important tools and techniques for treating problems in modern multivariate statistics in a systematic way. The ambition is to indicate new directions as well as to present the classical part of multivariate statistical analysis in this framework. The book has been written for graduate students and statisticians who are not afraid of matrix formalism. The goal is to provide them with a powerful toolkit for their research and to give necessary background and deeper knowledge for further studies in different areas of multivariate statistics. It can also be useful for researchers in applied mathematics and for people working on data analysis and data mining who can find useful methods and ideas for solving their problems.

It has been designed as a textbook for a two semester graduate course on multivariate statistics. Such a course has been held at the Swedish Agricultural University in 2001/02. On the other hand, it can be used as material for series of shorter courses. In fact, Chapters 1 and 2 have been used for a graduate course "Matrices in Statistics" at University of Tartu for the last few years, and Chapters 2 and 3 formed the material for the graduate course "Multivariate Asymptotic Statistics" in spring 2002. An advanced course "Multivariate Linear Models" may be based on Chapter 4. A lot of literature is available on multivariate statistical analysis written for different purposes and for people with different interests, background and knowledge.
