## Mathematics for the Nonmathematician (Dover Books on Mathematics) Morris Kline

Practical, scientific, philosophical, and artistic problems have caused men to investigate mathematics. But there is one other motive which is as strong as any of these—the search for beauty. Mathematics is an art, and as such affords the pleasures which all the arts afford." In this erudite, entertaining college-level text, Morris Kline, Professor Emeritus of Mathematics at New York University, provides the liberal arts student with a detailed treatment of mathematics in a cultural and historical context. The book can also act as a self-study vehicle for advanced high school students and laymen.

Professor Kline begins with an overview, tracing the development of mathematics to the ancient Greeks, and following its evolution through the Middle Ages and the Renaissance to the present day. Subsequent chapters focus on specific subject areas, such as "Logic and Mathematics," "Number: The Fundamental Concept," "Parametric Equations and Curvilinear Motion," "The Differential Calculus," and "The Theory of Probability." Each of these sections offers a step-by-step explanation of concepts and then tests the student's understanding with exercises and problems. At the same time, these concepts are linked to pure and applied science, engineering, philosophy, the social sciences or even the arts.

In one section, Professor Kline discusses non-Euclidean geometry, ranking it with evolution as one of the "two concepts which have most profoundly revolutionized our intellectual development since the nineteenth century." His lucid treatment of this difficult subject starts in the 1800s with the pioneering work of Gauss, Lobachevsky, Bolyai and Riemann, and moves forward to the theory of relativity, explaining the mathematical, scientific and philosophical aspects of this pivotal breakthrough. *Mathematics for the Nonmathematician* exemplifies Morris Kline's rare ability to simplify complex subjects for the nonspecialist.

### **From reader reviews:**

#### **Lela Hird:**

Inside other case, little persons like to read book Mathematics for the Nonmathematician (Dover Books on Mathematics). You can choose the best book if you want reading a book. Provided that we know about how is important any book Mathematics for the Nonmathematician (Dover Books on Mathematics). You can add information and of course you can around the world by the book. Absolutely right, since from book you can know everything! From your country right up until foreign or abroad you will be known. About simple matter until wonderful thing it is possible to know that. In this era, we are able to open a book or perhaps searching by internet system. It is called e-book. You need to use it when you feel bored to go to the library. Let's read.

#### **Linda Manuel:**

Do you have something that you like such as book? The e-book lovers usually prefer to opt for book like comic, short story and the biggest you are novel. Now, why not hoping Mathematics for the Nonmathematician (Dover Books on Mathematics) that give your entertainment preference will be satisfied through reading this book. Reading routine all over the world can be said as the means for people to know world a great deal better then how they react towards the world. It can't be explained constantly that reading routine only for the geeky particular person but for all of you who wants to become success person. So , for every you who want to start reading as your good habit, it is possible to pick Mathematics for the Nonmathematician (Dover Books on Mathematics) become your own personal starter.

#### **Michael Walker:**

Do you like reading a guide? Confuse to looking for your chosen book? Or your book seemed to be rare? Why so many query for the book? But any people feel that they enjoy intended for reading. Some people likes examining, not only science book but also novel and Mathematics for the Nonmathematician (Dover Books on Mathematics) or perhaps others sources were given understanding for you. After you know how the great a book, you feel desire to read more and more. Science reserve was created for teacher or students especially. Those guides are helping them to increase their knowledge. In other case, beside science book, any other book likes Mathematics for the Nonmathematician (Dover Books on Mathematics) to make your spare time more colorful. Many types of book like this one.

#### **Fred Peterson:**

Guide is one of source of knowledge. We can add our expertise from it. Not only for students and also native or citizen need book to know the up-date information of year to year. As we know those books have many advantages. Beside we add our knowledge, may also bring us to around the world. Through the book Mathematics for the Nonmathematician (Dover Books on Mathematics) we can consider more advantage. Don't you to be creative people? To get creative person must choose to read a book. Just simply choose the

best book that acceptable with your aim. Don't possibly be doubt to change your life with that book Mathematics for the Nonmathematician (Dover Books on Mathematics). You can more inviting than now.
